

LSAS Platform

Discovery Scan

See LSAS work on your data before
you commit to a pilot.

A SCOPED FIRST ASSESSMENT

Local policy evaluation. Reviewable findings. A clear next step.

For executive sponsors, security and compliance teams.

LSAS Platform, Inc.
Based in the United States of America

Govern what AI can say, do, and decide - at runtime.

Start with evidence.

Apply LSAS policies to approved existing data. Review what was found, what was not assessed, and where to begin your pilot.

Discovery

Starting at

\$15,000

Up to 3 environments

Includes 4 hours of technical support per engagement.

Expanded Discovery

Starting at

\$22,500

Up to 6 environments

Includes 8 hours of technical support per engagement.

Final scope and price are agreed before work begins. Additional environments, multiple businesses and larger workloads are scoped separately.

Included in both assessments

Reviewable findings

Executive findings with the approved source scope, severity and explicit coverage gaps.

A prioritized next step

Recommendations and proposed control points to review with your business and technical owners.

Executive readout

A working conversation to interpret the evidence and define an appropriate pilot scope.

One follow-up scan

Revisit the same agreed scope. Timing and workload limits are recorded in the engagement agreement.

Scope a Discovery Scan

lsasplatform.com/contact

From scan to pilot.

Provisioned access. Local evaluation. Evidence you can review with the people who own the next decision.

01 Agree the scope

Name the business, environments and approved sources. Confirm access, workload limits, selected policies and the evidence needed for a useful decision.

02 Download and run locally

LSAS coordinates approved distribution of the Windows x64 or macOS Intel package. Follow [start_here.html](#) and launch the workspace. Complete intake, choose policies and validate setup.

03 Review findings and coverage

Run the assessment and review local reports. Each selected policy produces its own evidence. Read-only source access does not apply remediation or change source content.

04 Choose the pilot boundary

Use the executive readout to prioritize findings and proposed control points. A pilot then evaluates integrated runtime controls for the agreed workflow.

Your data and your boundaries

The offline scanner evaluates content locally and does not upload scan results to LSAS. You control report sharing. The customer approves any report sharing for the readout. SQL Server connections and customer network access require separate qualification for the agreed environment.

Scope is explicit

Supported files include text, CSV, JSON, text-layer PDF and DOCX. File volume, sampling and SQL setup are agreed before work starts. Findings describe the assessed content; they do not certify compliance or establish that unassessed content is clear.

The packaged user guide covers startup and device approval. The scanner is unsigned; platform and customer-access readiness are checked during scoping.

Start with a scoped assessment

lsasplatform.com/contact

Know what is included.

Service hours, implementation deliverables and contractual service commitments are distinct.

Discovery: Includes 4 hours of technical support per engagement.

Expanded Discovery: Includes 8 hours of technical support per engagement.

Included support is separate from the implementation, validation and acceptance deliverables purchased through Discovery or a pilot. The support allowance covers eligible technical assistance outside those planned deliverables; it is not the total implementation effort.

Additional assistance

Standard technical support: \$225/hour. Specialized architecture, advanced integration or engineering: \$275/hour, or separately scoped fixed-fee work.

Allowance and authorization rules

- Discovery allowances expire at the conclusion of the engagement; pilot allowances expire at the conclusion of the 90-day pilot.
- Monthly subscription allowances do not roll over by default. Hours cannot transfer between contracts unless agreed in writing.
- Additional billable support requires customer authorization before work begins. Expanded implementation scope requires a change order.
- Custom policy development, new integrations, substantial architecture changes and professional services are separately scoped; they do not automatically consume ordinary support allowances.
- Serious product incidents can still be reported after included hours are exhausted. Incident handling and any charges are governed by the applicable support agreement.
- Support allowances are service hours, not refundable balances or subscription conversion credits. Categories do not provide unlimited engineering access or an embedded engineer.

Service commitments

Support hours are separate from coverage windows, initial incident acknowledgment, severity and escalation, restoration and resolution efforts, and platform availability. Applicable SLA commitments are documented in the executed service agreement. Initial acknowledgment is not guaranteed resolution; no 24/7 coverage or uptime target is included by default.

Support & service commitments
