Applied Governance Engagement

What it is

The Applied Governance Engagement is a bounded, 12-week engagement for one high-stakes workflow or boundary. We align control objectives with your stakeholders, implement LSAS Platform runtime governance for the chosen boundary, and deliver reviewable governance artifacts plus a path to rollout. It is how teams start with LSAS Platform on a fixed scope: one workflow, one boundary, one definition of done.

What you get

- Boundary map and control objectives register — what is governed, by whom, and to what standard.
- Configured policy packs and deterministic validators for the in-scope workflow.
- Governed execution with decision envelopes and audit evidence for every governed action.
- Exception model and escalation paths validated with your operators.
- Acceptance package: control posture, gaps, and next-scope recommendations.
- Path-to-rollout plan for expanding to the next workflow or boundary.

How it's scoped

- One workflow, one boundary, one definition of done — agreed up front.
- Fixed 12-week duration with explicit acceptance criteria.
- Delivery cadence with executive checkpoints and reviewable artifacts at each stage.

Who it's for

Executive sponsor, delivery lead, domain owner, and security/compliance stakeholders.
